

1. Use Extension Method
2. Use Complex Expression
3. Use Template

```
<DataGrid HideInsertIcon TEntity="Customer" >
  <Columns Context="customer">
    Use Extension Method
    <GridColumn Field="@t => t.CustomerType.FaText()" Title="نوع مشتری" />

    Use Complex Expression
    <GridColumn Field="@t => t.CustomerType == CustomerType.Real ? t.FName + " "
      + t.LName : t.CompanyName)" Title="نام مشتری" />

    Use Template
    <GridColumn Field="t => t.Gender.FaText()" style="width:100px">
      <Template>
        @if (customer.Data.Gender == Gender.Male)
        {
          <span class="c-icon fa fa-male"></span>
        }
        else if (customer.Data.Gender == Gender.Female)
        {
          <span class="c-icon fa fa-female"></span>
        }
      </Template>
    </GridColumn>

    Use Extension Method
    <GridColumn Field="t => t.MobileNumber.CallSeprator('-')" />
  </Columns>
</DataGrid>
```

```
@code {
}
```
