

Simple:

```
<TabPanel @bind-TabIndex="tabIndex">
    <Tabs>
        <TabPanelItem Title="Tab 1">
            <span>Content 1</span>
        </TabPanelItem>
        <TabPanelItem Title="Tab 2">
            <span>Content 2</span>
        </TabPanelItem>
        <TabPanelItem Title="Tab 3">
            <span>Content 3</span>
        </TabPanelItem>
    </Tabs>
</TabPanel>
```

Dynamic:

```
<TabPanel @bind-TabIndex="tabIndex">
    <Tabs>
        @foreach (var item in dic)
        {
            <TabPanelItem Title="@item.Value">
                <span>@item.Value</span>
            </TabPanelItem>
        }
    </Tabs>
</TabPanel>
```

@code

```
{
    int tabIndex = 1;
    IDictionary<int, string> dic = new Dictionary<int, string>();

    protected override void OnInitialized()
    {
        dic.Add(1, "مشخصات شناسنامه ای");
        dic.Add(2, "مشخصات عمومی");
        dic.Add(3, "مشخصات شغلی");
        dic.Add(4, "مشخصات ازدواج");
        dic.Add(5, "محل سکونت");
        dic.Add(6, "مشخصات فرزندان");
        base.OnInitialized();
    }
}
```
