```razor
@if (Searchable)
{
    <div style="padding:0 50px 5px 50px;">
        <StringTextBox @bind-Value="SearchData.Title" placeholder="عنوان" />
    </div>
}
<DataGrid @ref="Grid" TEntity="Product" TableHeight="200" HidePageSize>
    <Columns>
        <GridColumn Field="t => t.ProductCategory.Title" Title="گروه غذا" />
        <GridColumn Field="t => t.Title" />
    </Columns>
</DataGrid>

@code
{
    protected override void OnInitialized()
    {
        InitialSearchExpression(t => LookupStringSearchValue == null ||
            t.Title.Contains(LookupStringSearchValue) ||
            t.Code.StartsWith(LookupStringSearchValue));

        base.InitialTextExpression(t => t.Title);
    }

    [Parameter]
    public bool Searchable{ get; set; }
}
```
